

December , 2014

Dear Sir or Madam,

The following letter is on behalf of Jaimme Guan in support to his application in your company.

Jaimme was a student in the program i'm leading during his Master's course in Architecture at the University College London, Bartlett School of Architecture from 2013-14. He demonstrated remarkable talent and produced one of the best final projects in the program (90 students). The research he engaged in was in a context of a multi-disciplinary research cluster interested in the behavioural interaction, kinetic design, robotics and multi-sensory interfaces. His "1st Element" project is a brilliant invention which won the B-pro Bronze Ear Prize and it had been exhibited in Kinetic Art Fair London 2014 .

He proved to be very ambitious and motivated, capable of learning new skills, as well as a good team player. I believe he exhibits a great deal of promise and am thus writing to offer my highest recommendation.

Receptive to the provocative and challenging issues posed by the research, Jaimme expressed a great deal of interest over the course of the year. He approached questions of spatial behaviour and the HRI (Human-Robot Interaction) in the architectural robotics by inventing an innovative 3 axis spherical robot. With the pure primitive shape of the robot, he established a new platform to examine morphology and HRI in built environments. By challenging himself to create the first 3 axis spherical robot in the world as an engineer and a programmer, he proved that there is no boundary between architect, engineer and artist .

In Jaimme's case, particularly strong interest was directed towards convergence of physical interface and human-robot interaction. He expressed multiple times high motivation and desire to investigate further physical interfaces and construction from coding to physical devices and has been persistent in his search for the right opportunity to develop those interests further. Therefore I am very pleased to learn that he is applying jobs in these areas and have high hopes and expectations for his future career.

Moreover, he collaborated with other artists in new projects since graduating from the Bartlett. Jaimme has shown energetic enthusiasm for learning, openness to new ideas and fast acquiring of knowledge. Seeing his extraordinary achievement during this year, I can attest with high degree of confidence that he has a very bright future ahead of him.

I have been teaching at some of the most ambitious and well known postgraduate programs in the world, including Columbia University in New York, Architectural Association in London, and presently directing post-graduate program in Architecture at the UCL Bartlett. I am convinced that Jaimme will further develop in your company and am therefore offering my highest recommendation.

Yours sincerely,

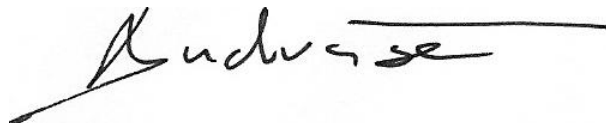

Alisa Andrasek Director, Graduate Architectural Design,

Bartlett School of Architecture
